GEOCONFERENCE ON CADASTRE 4.0
TRANSPARENCY, PARTICIPATION, COLLABORATION
24-28 OCTOBER 2016 | COIMBRA, PORTUGAL

Cadastre 4.0 is a system based on fully automatically processing within a network surrounding of people and devices embedded in technological intelligence

The aim is to get to a self-operating structure built upon intelligent devices and procedures and data collections where the demand is defining the process instead of building upon defined and fixed processes.

.....turning into an inverse model

The changing paradigm

Cadastre for Society gets created by Society

- **technology** is available and cheap
- **new type** user society growing
- land owners get **active** information providers
- citizen as **passive** data providers

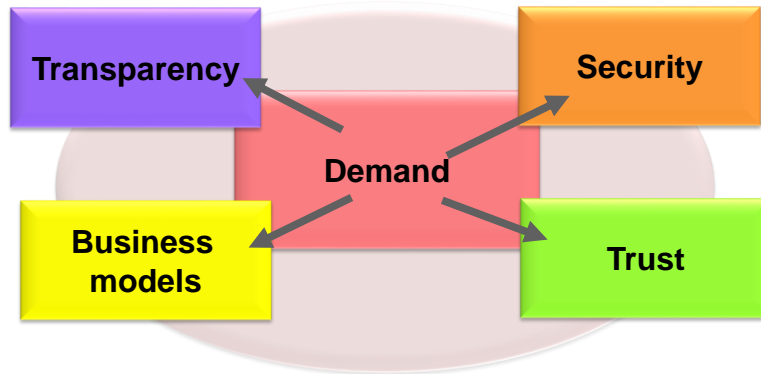

Stakeholders become Decisionmakers

- user profiles changing **communities**
- community creates their own "**regulations**,"
- **standards** set by communities

Citizen become Shareholders

- communities are **core part** of the (formal) processes
- citizen are **owner** of information
- **self-monitoring** systems secure fit-for-purpose - quality

Step by step towards Cadastre 4.0

- everyone produces and publishes everything
- data are accessible for everyone
- data reflect reality ≠ legal status
- shift of power from public authorities to communities
- data are public (community) good
- business models no longer valid
- change of paradigm for professionals
- work is no longer bound to location of land
- challenge to role of public agencies and private professionals
- land owners equal partners in systems

Why Cadastre 4.0?

- internet of things / VGI / sensors e.a. for added value
- smart procedures for selective processing of big data
- integrated processes to maintain cadastral systems
- self steering processes increase security for users
- product – people – private – public equal partners
- smart systems – automatic acquisition of data and information
- services on demand by users
- datasets know at their creation where they will be integrated
- flexible processes – defined in moment of request
- land owners may be big players in systems

Cadastre 4.0

Characteristics:

- ❖ decentralised steering by demand (users)
- ❖ users and stakeholders participate directly into the processes
- ❖ self-optimising processes and systems
- ❖ self-monitoring system
- ❖ transparent to users ► citizen ► land owners
- ❖ system finds data which is needed/appropriate from relevant data stock

The role of the profession
